WHAT IS PCI DSS?

The Payment Card Industry Data Security Standard (PCI DSS) is an information security standard for organisations that handle payments by debit or credit card. The PCI DSS was created by the Payment Card Industry Security Standards Council (PCI SSC) which is an industry body formed by an association of the the six major card brands globally namely Visa, Mastercard, American

Express, Discover, and JCB. The PCI DSS was created to reduce the amount of card fraud globally due to the mishandling of sensitive data associated with payment cards. It is a set of standards for merchants and service providers on how they handle this data while taking payments either for themselves or third parties.

HOW DIGITAL SECURES YOUR BUSINESS

PCI Pal® Digital facilitates a true omnichannel secure payment solution enabling your organisation to take payments across any communication channel. PCI Pal Digital enables your agents to provide secure payment options via digital engagement channels such as Webchat, WhatsApp, Social Media, Email and SMS. Additionally, this functionality is available from within the

PCI Pal platform that provides our Agent Assist and IVR products, so your agents have the ability to take payments from customers through any channel. PCI Pal's technology ensures these channels are descoped from the requirements of PCI DSS whilst retaining operational flexibility to engage in conversations with your customer in whatever way suits your business.

KEY BENEFITS INCLUDE:

CUSTOMER PEACE OF MIND

REDUCED AVERAGE HANDLING TIME

LESS PRESSURE ON AGENTS

INTEGRATES WITH ALL PAYMENT PROVIDERS

CARRIER, PHONE SYSTEM & CRM AGNOSTIC

INTEGRATES WITH EXISTING DIGITAL CHANNELS

HOW IT WORKS

01 Integrated within your existing systems

PCI Pal Digital can integrate into your existing digital channels, with your chosen payment service provider and CRM solution. The sensitive card data does not enter your contact centre and at no point can the agent see the card data.

02 Secure URL and supported payments

Once payment via a digital channel has been requested, the agent simply generates a secure URL which is sent to the customer. The customer clicks on the URL opening a secure payment page on their device where they enter their payment details. The agent and the customer can stay in conversation throughout the payment process and the agent can track the customers progress in real-time, offering support where needed and ensuring no disruption to the customer payment journey. Should payment be required via email or SMS channels, a time limit can be added to these secure URLs – effectively creating a Digital Invoice, meaning secure payments are available for both real time and anytime digital channels.

03 Payment is processed by your payment provider

Once the details have been entered into the secure URL, which is completely masked from the contact centre agent, the payment can then be processed. The agent will then process the payment. This 'processing' means the PCI Pal Digital solution will securely send the transaction to the payment provider for authorisation. No sensitive cardholder data enters your environment minimising the scope of PCI DSS.

CONFIGURATION OPTIONS

PCI Pal Digital is served from within the existing PCI Pal cloud platform, and is available globally.

It can work on various platforms and integrates with your existing systems, your chosen payment service provider and CRM solution.
